

Commitment to world-class healthcare

The new community hospital at Fort Belvoir will be part of an integrated healthcare network providing world-class medical service to the nations wounded, Active duty service members, retirees and family members. This new hospital is just one piece of the realignment outlined in BRAC Law 2005, and is designed to increase hospital and outpatient care to all service members and veterans in the National Capital Region.

This new, state-of-the-art, 120-bed facility will have seven levels and approximately 1.3 million square feet of space that includes:

- An intensive care unit
- Behavioral health inpatient unit
- Cancer Center
- Emergency center
- Additional operating rooms
- Improved diagnostics centers

Additionally, clinic space has been dedicated to outpatient services, with additional space planned for future outpatient expansion.

The greater capacity and enhanced specialty care brings the services closer to the beneficiaries and reduces the need to travel to the treatment centers in the North.

Inpatient Enhancements:

Intensive Care Unit

Level II Nursery (up from Level I)

Increased Medical & Surgical Beds

Pediatric Beds

Behavioral Health

(adult and child/adolescent)

New Design Features

Single-bed rooms with family zones

Increased HEPA filtration

Decentralized inpatient nursing support

Ceiling mounted patient lifts

Walled spaces to support patient privacy

Maximizing of natural and morning light

Care Centers

Reduced noise sources

Healing gardens and positive distractions

Residential feel rather than institutional

Testing and Procedure Rooms are more relaxing and comforting

Use of themes to integrate and enhance wayfinding

Evidence based design

Evidence-based healthcare design creates an environment that is therapeutic, supportive of family involvement and efficient for staff performance. It integrates research-based architectural design and holistic healthcare practices that result in improved patient outcomes, privacy, comfort and safety for both patients and staff. The design process for the new facility has incorporated as many evidence-based design concepts as possible.

Comprehensive healthcare

New Services:
